COMPUTER INFORMATION SYSTEMS MANAGERS play a vital role in the implementation and administration of technology within their organizations. They plan, coordinate and direct research on the computer-related activities of firms. In consultation with other managers, they help determine the goals of an organization and then implement technology to meet those goals. They oversee all technical aspects of an organization, such as software development, network security and Internet operations.

A bachelor's degree in computer information systems will open the doors to such opportunities as:

- Information systems strategy analyst
- Information systems management
- Information systems development
- Computer forensic investigator
- Mobile application developer
- Information systems security
- Information systems iteration
- Information system organization
- Web developer

Computer information systems professionals can have a career with:

- Any and all industries
- Private businesses
- Public firms
- Government agencies
- Not-For-Profit organizations
- Corporations
